

EcoStruxure™ Sustainability Portal

Visualise your energy usage, make informed decisions and reduce costs.

Let us help you to address the energy crisis, understand your energy consumption, reduce your energy costs and begin your digitisation journey.

The EcoStruxure Sustainability Portal (ESP) is a cost-effective, self-contained, plug and play solution which can easily be added to any application to monitor energy consumption.

Use the ESP in 4 Easy Steps to start making a difference today:

INSTALL

MEASURE

ANALYSE

TAKE ACTION

Simply attach the wireless sensors to the infrastructure/equipment you would like to monitor, configure the devices, then collect, store and visualise the energy data.

Designed with simplicity in mind, the ESP is easy to install, non-intrusive, and easy to capture real-time data.

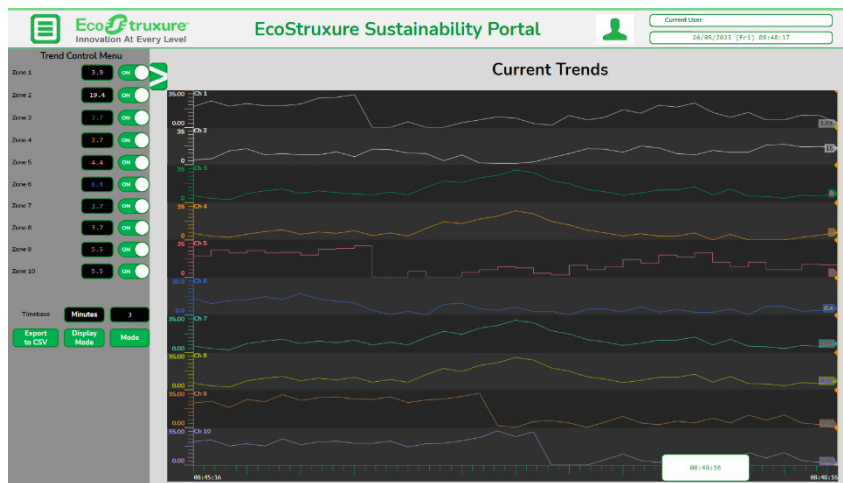

The ESP simplifies the management of electrical and energy systems for operators of small to medium Commercial and Industrial facilities.

The ESP is adaptable to change as it is both mobile and expandable, meaning that it can be moved to monitor another machine or building, and is initially configured for up to 10 wireless sensor channels to give a wide monitoring scope.

Pre-designed dashboards make it simple to view real time data captured by the sensors. The option to customise your trend data allows for easy comparison and analysis of trends.

Set alarms to alert you of any changes in the trend, or any abnormal readings.

Use your findings to take action, reduce costs and contribute to sustainable improvements.
